Benefits of cotton

Cotton is a vegetable fibre

Cottonseed lint, consisting of cellulose, is used for cotton yarn. Cotton upholstery textiles have many excellent properties:

Comfortable

Cotton has a soft and natural feel which makes it very comfortable and suitable for upholstery.

Cotton is ideal for soft seating which makes it well suited for private homes and low traffic areas.

Durable

Robust and durable, cotton also shows good results for lightfastness which relates to the ability of a textile to retain its colour under the influence of light.

Strong colour properties

Cotton has good colour and printing properties, since the fibre has a high absorption capacity, i.e. dye binds well to the yarn.

Environmental advantages

Being a natural fibre, cotton is a renewable source. Cotton textiles can be GREENGUARD® certified.
